When instructed to do so, please answer the following questions as best you can. Hand in this worksheet at the end of class. Don’t forget to put your name at the top!

1. Write a method `add` that takes as parameters an array of Strings `arrr` and a single String `s`, and returns an array with `s` appended to the end of `arrr` (as its new last element).

2. Now we’ll overload the method above to also take a third integer parameter `index` and rather than append `s` onto the end of the array, it inserts it at index `index`.

3. Write a for-loop that adds a * between successive elements of an ArrayList. It should not add *’s before the first element or after the last element, and it should work for any length ArrayList.
