

Announcements for December 2

- We will do the critter tournament in class next Monday. You must be in class for your critter to participate. If you are still improving your critter I will download any critters that are handed in by noon on Friday December 4 and use the new ones in the tournament. Just hand in the new critters again as Lab 10; that won't overwrite anything you have previously handed in.
- I might be a few minutes late for class again on Wednesday. Please don't leave.
- Adam Eck of the University of Nebraska will talk on Wednesday at 4:30 on autonomous data science – building systems that can understand data without human intervention. This will be in King 239
- John Doucette of the University of Waterloo will talk on Thursday at 12:15 on group decision making in the face of partial information. This will be in King 239. Because this will be at lunchtime, the department will provide pizza; you need to register in advance with Jackie in King 223 if you want our pizza. Either go see her or send email to jackie.fortino@oberlin.edu
