Printing Floats
In Lab 2 the interest.py problem asks you to print a dollar amount that you get from a float. Let's say your month is in variable $m$, and your current balance in in variable $balance$. If month is 3 and balance is 132.36548 you want to print a statement like

"The balance in month 3 is $12.37."

Here is an easy way to do this:

```python
print( "The balance in month %d is $%.2f."%(month, balance))
```
