Announcements for February 16

- If you haven’t already, read Chapter 6, on functions.
- Here: [http://fivethirtyeight.com/features/the-queen-of-code/](http://fivethirtyeight.com/features/the-queen-of-code/) is a fun 15-minute video about Grace Hopper, who was one of the first programmers and the inventor of the language COBOL. You don’t need to watch it, but if you are interested in the history of computers or the roles of women in computing, or the roles of women in the mid-twentieth century, you may find it informative.
- Alison Williams of the Multicultural Resource Center is doing a workshop on “How to Succeed in the Sciences” from 4:30 to 6 on Thursday, Feb. 19 in Peters 130. This should be useful for anyone thinking about possibly majoring in Computer Science (or, if you must, in Bio, Chem, NSCI, Physics, Geo, Math, ....)
- There are weekly meetings of the group Women in Math and Computer Science Thursdays, 5-6 PM in the Math Library, King 203. All who identify as women and have any interest in Mathematics or Computer Science are welcome.
