Questions
The following questions deal with the details of how classes work. Think about them and talk to each other before you answer.
Consider Program A. What will it print?

A. Nothing
B. It gets an error message
C. 1
Consider ProgramB. What will it print?

A. Nothing
B. It gets an error message
C. 1
In the PersonsWithMarriage class, how can we change the name of person X's spouse to "Fred"?

A) X.spouse = "Fred"
B) X.spouse.name = "Fred"
C) X.spouse.spouse.name = "Fred"
D) X.spouse.setName( "Fred" )
In the Point class we have
    def __init__(self, x, y):
        self.x = x
        self.y = y
    def set(self, x, y):
        self.x = x
        self.y = y

How can we make __init__( ) call set( ) to set the instance variables self.x and self.y?

A. set(x, y)
B. set(self, x, y)
C. set(self.x, self.y)
D. self.set(x, y)
