

Clicker Q on Linked Structrues

What code will insert 51 between 56 and 45?

A.

```
Node p = 51;  
head.next = p;  
p.next = 45;
```

C.

```
Node p = new Node(51);  
p.next = head.next;  
head.next = p;
```

B.

```
Node p = new Node(51);  
head.next = p;  
p.next = head.next;
```

D.

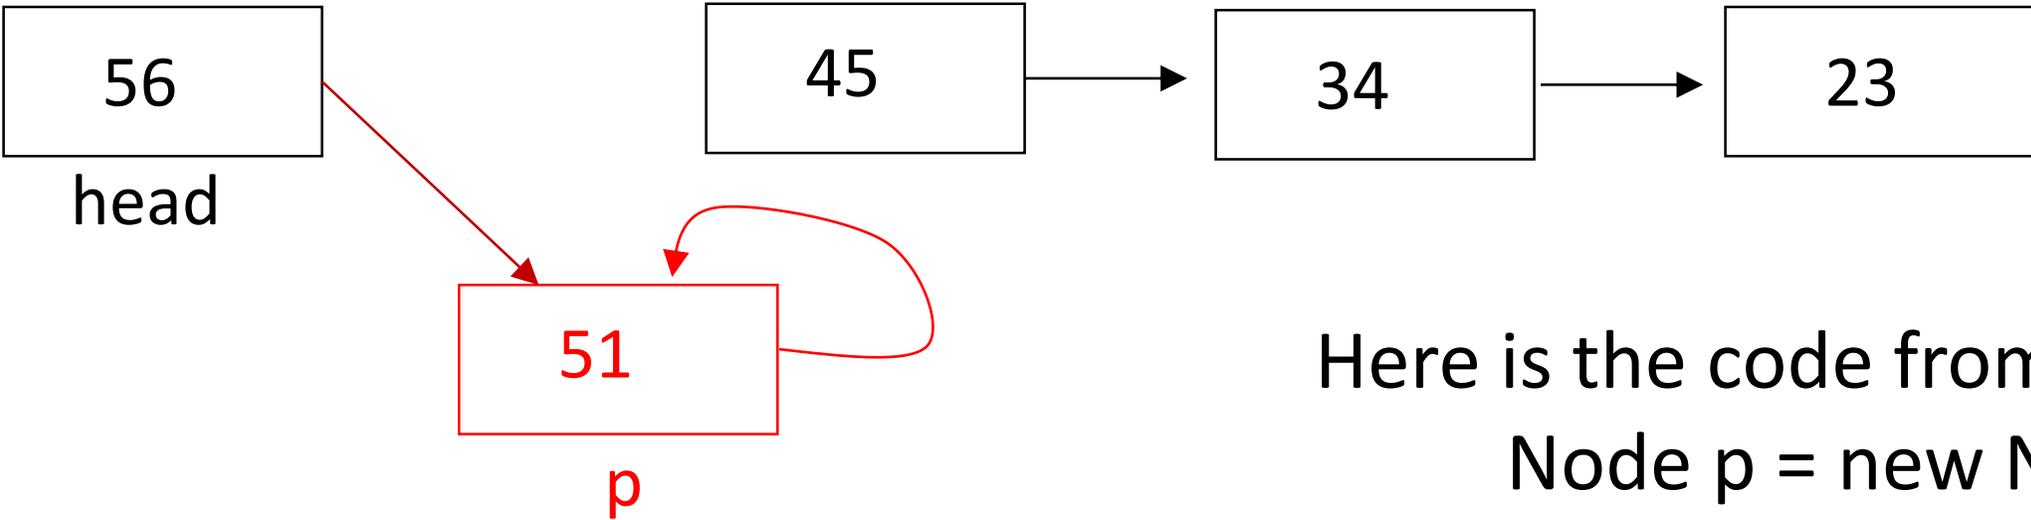

```
Node p = new Node(51);  
Node q = head.next;  
head.next = p;  
p.next = q;
```

Answer: C and D are both correct.

Answer A is type-incorrect: on the first line it says `Node p = 51;` you can't set a node equal to an int. Node is a structure like this:

```
class Node {  
    int data;  
    Node next;  
    ...  
}
```

Answer B results in this:

Here is the code from answer B:

```
Node p = new Node(51);  
head.next = p;  
p.next = head.next;
```
