Exam 1 Solutions

There are 6 numbered questions. The 6 parts of Question 1 are worth 4 points each. Questions 2 through 6 are worth 15 points each. You get one point for free.

1. Which languages are regular? You don't need to prove your answers. Write an " $R$ " in the blank next to the description of each language you think is regular. Write " N " for any language you think is not regular. In each case the alphabet is $\Sigma=\{0,1\}$
a. __R__Strings that end in exactly five 1s. So 01011111 is in this language but 010111111 is not.
b. __R_Strings with any number of 0 s followed by an even number of 1 s .
c. __R_ $\left\{0^{m} 1^{n} \mid\right.$ if $m$ is even then $n$ is also even; if $m$ is odd then $n$ is also odd $\}$
d. __R_Strings where the digits sum to a number divisible by 5 (i.e., the digits sum to $0,5,10,15$, etc.)
e. __N_Strings where there are at least as many Os as 1s.
f. $\quad$ _ $\quad \_0^{*} \mathcal{L}$ where $\mathcal{L}=\left\{0^{n} \mid \mathrm{n}\right.$ is prime $\}$. Note that strings in this language have any number of 0 s followed by a prime number of 0 s .
2. Give a DFA for the strings of 0 s and 1 s that contain the substring 010. For example, 110101 should be accepted by this DFA but 1001100 should not be accepted.

3. Here is an $\varepsilon$-NFA, with start state $A$.
a) Convert this NFA to a DFA
b) Describe in English the strings it accepts.

Solution:

This accepts all strings ending in 0.
4. Suppose we know that for some language $\mathcal{L}$ the language $00 \mathcal{L}=\{00 \alpha \mid \alpha \in \mathscr{L}\}$ is regular. Must $\mathcal{L}$ be regular? Either give an example where $\mathcal{L}$ is not regular and $00 \mathcal{L}$ is regular, or else show that $\mathcal{L}$ must be regular if $00 \mathcal{L}$ is.

The language $\mathcal{L}$ must be regular. Suppose $P=(\Sigma, Q, \delta, s, F)$ is a DFA accepting $00 \mathcal{L}$. Let $q=\delta(s, 0)$ and let $q 1=\delta(q, 0)$. State $q 1$ is where you get to in $P$ on input 00 . Let $P^{\prime}=(\Sigma, Q, \delta, q 1, F) . P^{\prime}$ is the same as $P$ only with start state $q 1$. Now suppose string $\alpha$ is in $\mathcal{L}$. Then $00 \alpha$ is in 00 L and takes $P$ from state $s$ to $q$ to $q 1$ and then eventually to a final state. So $\alpha$ takes $P^{\prime}$ from $q 1$ to a final state, and $P^{\prime}$ accepts $\alpha$. Similarly, if $\alpha$ takes $P^{\prime}$ from $q 1$ to a final state then $00 \alpha$ takes $P$ from $s$ to a final state, so $00 \alpha$ is in $00 \mathcal{L}$ and $\alpha$ must be in $\mathcal{L}$. Altogether, the DFA $P^{\prime}$ accepts $\alpha$ if and only if $\alpha$ is in $\mathcal{L}$, so $\mathcal{L}$ is regular.
5. Consider the following DFA. We had an algorithm for converting a DFA to a regular expression. This involved making a table of regular expressions $r_{i j}^{k}$.

Here is the first column of a table of the $r_{i j}^{k}$ expressions; find the 4 entries of the second column.

|  | $\mathrm{k}=0$ | $\mathrm{k}=1$ |
| :---: | :---: | :---: |
| $r_{11}^{k}$ | $\varepsilon+1$ | $\mathbf{1}^{*}$ |
| $r_{12}^{k}$ | 0 | $\mathbf{1 * 0}^{*}$ |
| $r_{21}^{k}$ | 1 | $\mathbf{1 1 *}^{*}$ |
| $r_{22}^{k}$ | $\varepsilon+0$ | $\mathbf{\varepsilon + 1 * 0}^{\mathbf{c + 1}}$ |

$$
r_{i j}^{1}=r_{i j}^{0}+r_{i 1}^{0}\left(r_{11}^{0}\right)^{*} r_{1 j}^{0}
$$

6. Use the pumping lemma to show carefully that the language $\left\{0^{m} 1^{n} 0^{n} \mid m>=2, n>=0\right\}$ is not regular.

Suppose this language is regular; let $p$ be its pumping constant. Let $w=0^{2} 1^{p} 0^{p}$. This is longer than $p$, so let $w=x y z$ be any decomposition of $w$ where $y$ is not empty and $|x y|<p$. All of $y$ must come from the initial $0^{2} 1^{p}$ elements of $w$. If $y$ contains any initial $0 s$ then $\mathrm{xy}^{0} \mathrm{z}$ has fewer than $\mathbf{2}$ initial 0 s . If y contains any 1 s then $\mathrm{xy}^{0} \mathrm{z}$ has fewer 1 s than trailing 0 s. Either way, $\mathrm{xy}^{0} \mathbf{z}$ is not an element of our language so our string $w$ is not pumpable. This contradicts the Pumping Lemma, so our language can't be regular.
