

Towers of Hanoi

The Towers of Hanoi puzzle is an old game based on the mythical story that somewhere in Hanoi there is a temple with 3 giant towers containing 64 golden disks. Each disk is a different size. Monks in the temple are busy moving disks from one tower to another. The rules are simple:

- Only 1 disk can be moved at a time
- No disk can be put on top of a smaller disk.

The monks started with all 64 disks on one tower. When they have finished moving all 64 disks to the next tower, the world will end.
